DETAILED ACTION

Claim Rejections - 35 USC § 102

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

Claim 11-13 are rejected under 35 U.S.C. 103(a) as being unpatentable over Botz et al. WO 02/066293 A1.

Botz et al. describes a method for switching on a power switch (S1,S2) disposed between (battery elements) B1 and B2 which comprises the steps of: connecting at least one compensating element (DLC) for equalizing currents flowing between the battery elements which are to be connected to one another and can decay before the

Art Unit: 3747

power switch is subsequently closed in a current-free and no-voltage situation, the compensating element being connected in parallel to switching contacts of the power switch which is in an open position.

At the time of invention, it would have been obvious to exchange the batteries for capacitors or add capacitors as batteries and capacitors are known power accumulators interchangeable in the art.

Regarding claim 12, the time delay is inherent in the hardware. Regarding claim 13 Botz et al. discusses the connection between switches S1 and S2.

Allowable Subject Matter

Claims 14-20 are allowed.
